EXPERIENCE

General Motors February 2021 - Present

Software Engineer, Data Governance (April 2026 - Present) *Austin, TX*

- Provide hands-on support for Databricks onboarding and data access requests across a 5,000+ member internal support channel, including workspace provisioning, service principal troubleshooting, Terraform configuration review, and access approval workflows
- Lead AI help desk rollouts for engineering teams, building conversational intake workflows in Slack that replace form-first requests with guided collection and automated routing, from requirements and proof of concept through testing, training, and launch
- Built and maintain a weekly Databricks pipeline that scores data domains against governance KPIs with automated data quality checks, powering the scorecard for monthly data steward reviews

Data Engineer, Connected Vehicle Data Engineering (April 2025 - April 2026)

- Designed and deployed event-driven data collection systems, processing real-time telemetry across GM's connected vehicle fleet
- Resolved production data collection failures for rental fleet partner (100,000+ vehicles) by implementing direct read method to bypass queue bottleneck, ensuring accurate fuel level and odometer telemetry
- Developed Python ETL pipeline migrating CSV/XML configuration files from Git repository into Databricks, enabling PowerBI analytics for deployed data collection programs

Software Engineer, Big Data Engineering & Infrastructure (February 2021 - April 2025)

- Developed GM's custom Hadoop distribution (GMDP) by integrating open-source components including Tez UI, Ambari, and Livy, migrating from Cloudera and reducing annual costs by $1.2M
- Contributed to Apache Ambari and Bigtop open-source projects by implementing Livy service integration (Ambari PR#3790, Bigtop PR#1282)
- Automated Docker-based Hadoop development environment, reducing developer setup time from 35+ minutes to 10 minutes by eliminating manual build and deployment steps
- Responded to Log4Shell vulnerability by developing automated remediation script for production Hadoop clusters, integrating into standard startup process for ongoing protection

PROJECTS

Coaster: E-Ink Cycling GPS https://paulyakovlev.github.io/coaster/

- Designing and building an ESP32-S3 cycling computer with a 200x200 e-paper display that records rides from GPS and barometer sensors to GPX files and uploads them to Strava when it reaches home Wi-Fi

EDUCATION

University of California, Santa Cruz 2020

Bachelor's Degree in Computer Science

SKILLS

Languages: Python, Java, C++, Bash, SQL, JavaScript

Technologies: Node.js, React, Django, Docker, Kubernetes, PostgreSQL, Databricks, Azure, CI/CD
